MOBIUS 140 BLACK EDITION

Ring blade design

Interconnecting fan blades are designed for a reinforced and rigid structure that eliminates vibration and ensures stable fan rotation.

Oil reflow system

Oil flows back to the sealed bearing to create constant lubrication against friction and increase the lifespan of the fan.

Loop dynamic bearing

A loop dynamic bearing design utilizes a thick oil coating and lubrication to provide stable performance.

Dust protection

A sealed, concave bearing prevents air and dust exposure and ensures a smooth transfer of motion.

Ring Blade Design (RBD) – Interconnecting fan blades designed for a reinforced structure, eliminating vibration for stable fan rotation.

Loop Dynamic Bearing – New loop dynamic bearing design utilizes thick oil coating and lubrication to allow for stable performance.

Dust protection – A sealed, concave bearing prevents air and dust exposure and ensures a smooth transfer of motion.

Oil reflow system – Oil flows back to the sealed bearing to create constant lubrication against friction and increase the lifespan of the fan.
